USE TELEPHONES UNDER THEIR NAMES

INTRODUCTION

The name "Hiti" signifies high elevation, which gives a longer season, free from early frost and injury to late growth.

This catalog contains only a list of plants grown at Hiti Nursery, *but stock of all kinds is furnished. Prospective buyers are invited to call at or write to the Boston office and discuss their wants. Mr. Roland E. Baker will attend to all direct Nursery customers.*

The Nursery, on Dana Road, is about a mile by road from Pomfret Station of the N. Y., N. H. & H. R. R., or a shorter cut up the railroad track. Telephone or telegraph Mr. Baker the day previous to your coming and he will meet you at the station on arrival, taking you back when ready. This enables you to carry home any little purchase made, without additional expense, or delay. Visitors to the Nursery between April 1st and November 1st will find some one at hand during business hours to show the stock and take orders. Large specimen trees can be seen on property near by, showing the beauties of their older growth.

In these days of automobile travel customers find it easy to visit Pomfret and *select their plants personally.* In this way they see for the first time perhaps some handsome new things that are just what are wanted for certain effects or uses. If they come prepared, the plants can generally be dug at once and taken away with them, thus saving time, cost in packing and transportation, besides affording the plants themselves only a slight shock in their removal. We strongly advise this course whenever practicable. Spring is usually the *best* time to handle Nursery stock but the season for many plants may be extended by a little care to include the summer and fall months also; with but slight risk of failure.

The Nursery is closed during the winter months, though of course it is open to inspection at any time. The whole area embraces only about eight or ten acres, on which are two small buildings used as tool and packing houses. *All plants are thus taken up near at hand and can be quickly packed without loss of time or injury from root exposure, a very great advantage to purchasers. The roots are packed in fresh sphagnum moss, which is a great benefit and safeguard if delayed in transit.*

Large sized stock in quantity can be delivered economically by auto as far as Boston to arrive in perfect condition.

Regular shipments by express or freight carefully put up and f. o. b. *at cost of packing.*

Terms cash, unless otherwise agreed upon.

JAMES H. BOWDITCH, Proprietor,

**NURSERY INSPECTION
AND REGISTRATION CERTIFICATE**

This is to certify that Hiti Nurseries of Pomfret Center, Conn., has registered as a Nurseryman, that the nursery stock has been duly examined in compliance with the provisions of Chapter 265, of the Public Acts of 1925, and that it is apparently free from dangerously injurious insects and plant diseases.

This certificate expires August 1, 1927.

W. E. BRITTON,

State Entomologist.

EVERGREENS.

25	“ “ “ 15 to 18 in.....	2.00
50	“ “ “ 12 to 15 in.....	1.75

This little dwarf spruce from Alberta is one of the most attractive new evergreens. Very dense in conical habit, it is of soft texture and neat appearance; most useful for any place where formal garden finish is sought for architecturally.

		Each
24	Picea polita, 6 to 8 ft.	\$6.00
25	PICEA PUNGENS AUREA, 18 in.	10.00
100	“ “ “ 12 in.	5.00

An exclusive product of this Nursery. Some years ago about a dozen grafted plants were made up by the late Jackson Dawson of the Arnold Arboretum, Jamaica Plain, Mass., but it was a very difficult subject and could not be persuaded to yield to ordinary treatment.

It has a bright cheerful golden tint in winter and makes a very good companion with Picea pungens Bakeri for a single bit of contrasting color. One specimen is enough, but it should be included in any representative planting, where winter effects are so desirable as in this latitude. The early summer growth is a pleasing light green. The original plant, a chance seedling, is now twenty-five to thirty feet in height, growing in this Nursery.

		Each
5	PICEA PUNGENS BAKERI, 2 ft.	\$25.00
20	“ “ “ 18 in.	20.00

The best *blue type* on the market today among the entire evergreen group. A product of this Nursery. Carefully grown from *cuttings only*, so as to insure the best results.

Stocky, well-furnished specimens.

Plant on an open sunny lawn where it will have full chance for development.

Always keep it in *open soil* extending at least one foot outside the spread of the lower branches. This insures protection of these latter against injury from the lawn mower, besides giving a better base or setting for the tree itself.

		Each
10	Pinus cembra, 3 to 4 ft.	\$4.00

An excellent low growing Yew corresponding to the spreading Junipers.

Each

35	Taxus Sieboldii, 12 to 18 in.....	\$3.00
25	“ “ 10 in.....	2.00

The Japanese Yews (*T. cuspidata*) are of exceptional hardiness, good coloring, and generally speaking, by far the most satisfactory of the entire Yew family; and we therefore confidently recommend their broad use for many purposes.

The handsomest forms have been carefully selected and stock of these grown from outdoor cuttings so that the result is sure and exact. We urge prospective customers, or simple visitors, to inspect these young plants and see for themselves their intrinsic beauties. If, however, distance or inconvenience interfere with personal selection, we will gladly make this choice for you if a general statement of planting conditions are given us as a guide to a wise furnishing of what is really needed.

Many old customers living at a distance request us to forward to them from time to time any new or desirable things that we have come across in our Landscape work.

			Each
8	Thuja occidentalis	Columbia, 2½ to 3 ft..	\$2.00
5	"	" " 18 to 24 in..	1.50
4	"	" George Peabody, 6 to 8 ft.	12.00

RECOMMENDATION.

Some customers would like a little advice or suggestion as to what plants to use or order from the Nursery, and we wish to provide for this.

For example—there are quite a number of varieties, especially among the evergreen group, that are new and desirable for small places or gardens and if the selection is left largely in our hands we are confident the result will be much more satisfactory. Evergreens of small size should be used in all instances where immediate effects are not imperative.

Again in orders out of the State the red tape of inspection and even entire prohibition often makes for provoking delay and even cancellation, so that we have to be careful even of our promises, as changes in these laws and regulations occur every season and have to be recognized accordingly.

We particularly aim at a hardy selection of pleasing variety.

Set the plants out, if you like, in Nursery form at first — i. e. in rows or beds and see how they look to you. They can be moved easily a year or two later, where finally wanted.

CONCLUSION.

It is sometimes asked why we do not publish a full descriptive Catalogue. Our reply is that the Nursery is small; intended mainly to supply the immediate needs of the proprietor and his personal customers, and we find that there are comparatively few people, as purchasers, who do not know or cannot find out what the list offers through the ordinary botanic names, and we are willing always to explain further to those who are in doubt about anything.

Among our regular customers are included today house architects, engineers, and nurserymen who desire prompt attention, choice stock, and the most careful handling and packing: i. e., reliable service.

LANDSCAPE GARDENING

Large or small country places are carefully treated with reference to outdoor improvement.

Gardens of all kinds made to fit any condition offered.

Combination fruit and flower designs are often very useful and effective, where space is more or less limited and good cultivation easily maintained.

JAMES H. BOWDITCH.
